Bio-Concrete Using Agricultural Waste

Sustainable Civil Engineering Materials Research

Mon Nov 09 2026 - Gayathri Murala Portfolio

Research: Experimental evaluation of pozzolanic agricultural ash replacing Portland cement
Target Mix: M25 and M30 grade concrete with 5% to 20% replacement ratios
Key Outcomes: Optimal 10% replacement demonstrated equivalent 28-day compressive strength
Impact: ~14% reduction in embodied carbon footprint of structural mixes
